

# 06 – Project Testing

## Testing Objective

Verify that incidents are classified correctly for matching and non-matching inputs.

## Test Cases

TC01 – Password issue: expected Access-related classification.

TC02 – Email issue: expected Email classification.

TC03 – Network/Wi-Fi issue: expected Network classification.

TC04 – Laptop/Desktop issue: expected Hardware classification.

TC05 – Unrecognized description: expected Other/Manual Review path.

TC06 – Incident creation without required text: flow should follow safe/default handling.

## Expected Result

Each matching test follows the intended branch and updates the configured Incident fields. Non-matching input follows the default path.

## Evidence

Capture before/after Incident records and Flow Designer execution details in Test-Screenshots.
